

7. Abstract of the Disclosure

An information processing system comprises an information processing apparatus and a management host. The information processing apparatus is used to operate a plurality of applications to request data input/output from a storage. The management host manages the storage. The information processing apparatus comprises an access monitoring section. The access monitoring section monitors an access request from the application and obtains information about the access request for each of the applications. The management host comprises an acceptance section, an estimated load calculation section and a load data output section. The acceptance section accepts specification of a new application. The estimated load calculation section calculates estimated load data in case of addition of the application based on information obtained by the access monitoring section. The load data output section outputs estimated load data calculated by the estimated load calculation section.
